

Cheque Scanners

Description:

The single-sheet scan-module RS 891 brings reliable and efficient document input to the self-service area. The device reacts when paper is inserted and starts processing automatically. The REINER RS 891 has cameras for both sides producing color, Grey scale and black/white images. And the front-side camera can be upgraded to a color camera with UV and IR-light. For cheques with magnetic code-lines (E13B and CMC7), the MICR head reads the data and delivers this to the application alongside the image(s). A rear-side endorser is standard and a front-side roller-stamp option is available. The complete document path is accessible without the need for tools.

Features:

- ✓ Accepts crumpled, torn, mutilated cheques
- ✓ Document in-feed tray (customizable)
- ✓ Shutter
- ✓ Document sensor before shutter
- ✓ Front and rear side colour cameras (front side camera also with ultraviolet and infrared option)
- ✓ Mechanical and electronic document alignment
- ✓ Document transport control
- ✓ Position sensor
- ✓ Double feed sensor
- ✓ Rear-side ink-jet alphanumeric endorser
- ✓ MICR reader
- ✓ Front-side roller stamp option
- ✓ USB 2.0 interface
- ✓ Fully accessible paper path
